TOOTH FILLING

A dental filling is a procedure that restores a damaged tooth by filling in a cavity or crack with a filling material. Fillings can also improve the appearance of teeth.

Benefits:

- Restores the tooth's original shape and function.
- Prevents further tooth decay by sealing off the area where bacteria can enter.
- Improves the appearance of the tooth

Types of filling materials:

- Composite resin: Tooth-colored, blends well with natural teeth.
- Silver-colored, durable, and relatively inexpensive.
- Resin: Tooth-colored and aesthetically pleasing, often used for front teeth.
- Glass ionomer: Tooth-colored, bonds well with the tooth structure and releases fluoride to help prevent further decay.

Charges will differ from Rs 750 to Rs 1950 based on your tooth condition and type of filling.

If visit the clinic will get the proper clarity
